

*Delivery of a high quality, sustainable, repairs service with positive community benefits*

## How to replace your sink plug and chain

**Step 1:** You will need to purchase a sink plug from a local DIY/hardware store.

**Step 2:** Before you start, make sure that the plug fits snugly in the sink hole to prevent water escaping.

**Step 3:** Using a pair of pliers, bend the clips on the chain and remove the old plug. If the chain is broken and needs replacing, again, using a pair of pliers, bend the clips of the chain and remove from the basin.

**Step 4:** Clip the new chain and/or plug into place and bend the clips so that the plug is securely fastened to the chain.

**Step 5:** Test the fitting of the plug again to ensure that it is secure.
